Saferoad sells its production facility in Trondheim

Saferoad AS has sold its production facility, Ørsta Stål Trondheim. The purchaser is FerroZink Trondheim AS.

The business being sold is involved in hot galvanisation and mechanical production of gratings, stair treads and associated products.

The reason for selling Ørsta Stål Trondheim is that the business does not fall within the SafeRoad Group's main strategy, which is to become the leading supplier of traffic safety systems in Europe. The decision was therefore made that the department in Trondheim would be best served by a change of ownership and management structure. For customers and suppliers, the change in ownership will have no other significance than that the commercial relationship will transfer to FerroZink Trondheim. Saferoad AS will retain a 40% share of ownership in the new company.

FerroZink Trondheim assumed ownership of Ørsta Stål Trondheim as from 1 October 2007.
